Objective: A bilingual college graduate seeking junior-level position in software engineering or web development.

Education:

Virginia Commonwealth University - *Richmond, VA* *May 2017*
Bachelor of Science in Computer Engineering
Relevant courses:
Development/Programming: ●C/C++ ●Java ●Android Studio ●Software engineering ●Embedded Systems Programming
Computer Engineering: ●Digital Logic Digital Systems ●Computer Organization & Design
Electrical Engineering: ●Electrical Circuits ●Power System Analysis ●Microelectronics ●Signals & Systems ●Microfabrication
Professional/Business: ●Economics of Product Development ●Speech for business and professionals' ●Macroeconomics

Piedmont Virginia Community College - *Charlottesville, VA* *May 2013*
Associates of Science in Computer Science
Career Studies Certificate in Computer and Network Support Technologies

Skills

Programming: ● HTML ● CSS ● JavaScript ● JAVA ●PHP ●MySQL
Tools: ●Bootstrap ●jQuery ●Sublime Text ●Brackets ●IntelliJ IDEA ●Android Studio
**Familiar with: Swift, Xcode, Python, Ruby, JSON, AngularJs,* C/C+

Projects | Assignments

-Personal Website Project:
Created personal resume website hosted on github.com to showcase my skills using web technologies & projects

-Senior Design Capstone Team Project (Sponsored by NASA Langley Research Center) *May 2016 – Spring 2017*
Remote Aerial Mapping Spectrometer (RAMS):
In a team of four to design a low weight, low cost, self-powered spectral mapping environmental monitoring sensor payload for mounting on unmanned aerial vehicles. RAMS was designed to make environmental data richer and more cost-effective than most current techniques used by environmental scientists.

- Tasked with designing and 3D printing payload parts
- Assisted in the set up of Raspberry Pi microcomputer to connect to LIDAR & Spectrometer sensors
- Assisted in programming and debugging sensors and 3-axis gimbal controller + IMU
- Project tasks included participation in design, budgeting, specifications, time-management, sponsor meetings, and presentations.

-Microcomputer Systems Project: Implemented an embedded system capable of navigating through a maze, follow a black line, and draw on a canvas all executed autonomously – used C & Assembly Language
-Advanced Engineering Programming Assignment: NMEA GPS Sentence Parser implemented as a state machine – using C++

Work Experience

Jewett Automation, *Controls Engineer Intern* *April 2015 – August 2015*
Helped in the assembly, programming, and successful deployment of an industrial automated O-Ring spout assembler, for the MOEN faucet company, that fitted faucet parts with O-ring spouts at a rate of two parts a second.

- Updated existing AutoCAD Electrical drawings for projects
- Setup Keyence IV-Series Vision Sensors
- Modified existing RSLogix5000, Compact Logix PLC programs
- Programmed Allen Bradley (HMI - Human machine interfaces)

Accomplishments: Recipient of VCU'S Sternheimer award – A prestigious grant of $1800 awarded to our team for exhibiting outstanding innovation and entrepreneurship on (RAMS) Senior Capstone Project
